EDUCATION

University of Texas at Arlington

Arlington, TX

Bachelor (B.S.) in Computer Science – GPA: 3.893/4

Aug. 2021 – May 2025

- Relevant Courses: Fundamentals of Machine Learning, Neural Networks & Deep Learning, Artificial Intelligence, Algorithms & Data Structures, Database Systems & File Structures, Operating Systems, Information Security

EXPERIENCE

Associate - Software Development & Engineering

Sept 2025 – Present

Charles Schwab

Southlake, TX

- Engineer backend financial batch processing systems using Java, Spring Boot, and Spring Batch, supporting millions of brokerage accounts and billions of dollars in daily cash flows as part of a modernization effort.
- Analyze and troubleshoot backend services to ensure high-accuracy financial calculations and reliable processing of large-scale account-level cash operations, reducing processing errors and improving system stability.

Data Scientist

June 2025 – August 2025

Lightbeam Health Solutions

Coppell, TX

- Developed a pediatric machine learning model to predict and reduce avoidable ER visits and hospital admissions using large-scale healthcare claims and EHR data, processing millions of patient records and engineering a training cohort of 400K.
- Reduced dimensionality from 5K-15K raw features to 1K-1.5K using mini-model-based variable selection (RF, RR, MIM, Net, MRMR); trained models with H2O AutoML, tracked experiments via MLflow, and validated rigorously using an outer test set for deployment readiness.
- Final outer test performance: AUCPR = 0.0544 (vs. 0.0148 baseline, Lift = 3.67), ROC AUC = 0.7602; achieved Lift = 4.72 at high-risk threshold (0.05) and 3.1 at medium-risk (0.15), allowing targeted intervention strategies in clinical workflows.

Software Engineer - AI Trainer

May 2024 – September 2024

DataAnnotation

Remote

- Designed complex programming problems and evaluated 500+ AI-generated code solutions for correctness, efficiency, and adherence to real-world software engineering practices.
- Provided structured written feedback and technical analysis to improve AI performance on programming tasks in Python and Java, increasing response accuracy by 30%.
- Analyzed and debugged AI-generated implementations across multiple problem domains, identifying logical errors, performance issues, and incomplete edge case handling.

PROJECTS

Arlington Fire Risk AI Prediction System | *Python, TypeScript, Flask, React.js, MongoDB*

August 2024 – May 2025

- Built a full-stack web application that predicts fire risks to help optimize resource allocation for 50+ fire/EMS teams.
- Utilized machine learning techniques, such as RandomForestRegressor, to calculate areas at risk for fire.
- Preprocessed data to estimate risk scores on 2+ years of historical weather, fire incident, and infrastructure data.

TECHNICAL SKILLS

Languages: Python, Java, C#, C, SQL, TypeScript, JavaScript, HTML/CSS

Frameworks: Spring, Springboot, Spring Batch, Flask, React.js, FastAPI, Angular

Developer Tools: Git, Github, VS Code, Docker, PostgreSQL, MongoDB, Snowflake, GCP, Linux/UNIX, Jupyter Notebook, Agile, Jira, MLFlow, H2Oflow

Libraries: NumPy, Matplotlib, scikit-learn, Tensorflow, Keras, PyTorch, OpenCV, pandas, SQLite

CERTIFICATIONS

AWS Certified AI Practitioner

March 2026

- Obtained AWS Certified AI Practitioner certification, showcasing the ability to leverage AWS AI services (Lex, Comprehend, Rekognition) to automate business processes and drive data-driven decision-making using cloud-native AI.

Google Cloud Associate Cloud Engineer

December 2025

- Achieved Google Cloud Associate Cloud Engineer from Google Cloud, demonstrating ability to deploy scalable infrastructure for AI model training, data pipelines, and large-scale dataset management on Google Cloud Platform.

UTA Certificate in Cyber Security

May 2025

- Gaining core knowledge of cryptographic techniques, public key infrastructure, secure programming, and network security.
- Acquiring expertise in intrusion detection devices, firewalls, and securing network systems.
